

TARGET LASERTRACK

KNOW WHAT'S OUT THERE...

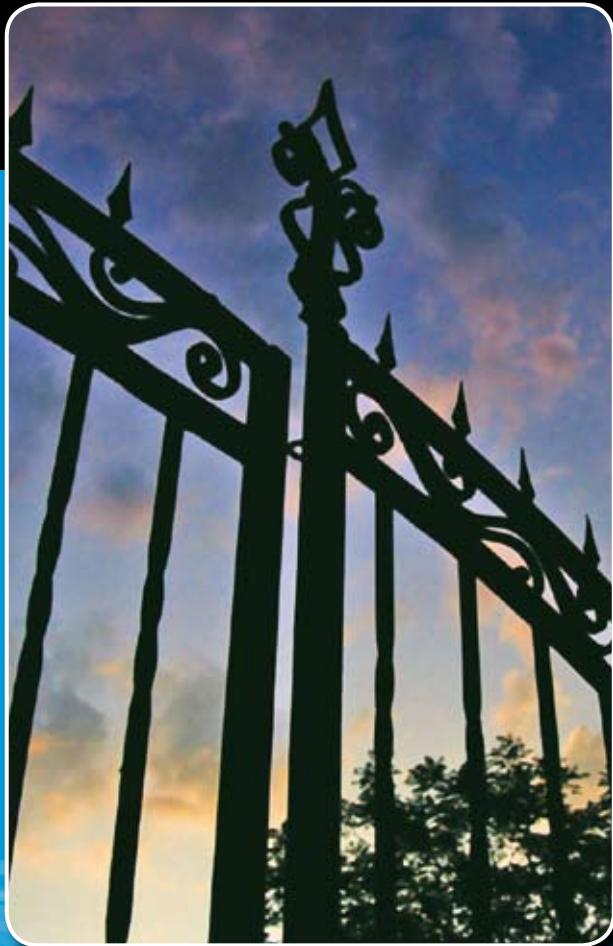

Target LaserTrack is world's most advanced class 1 laser remote control system. Therefore it is a very high-quality system.

All innovative, high-tech components are developed and exhaustively tested by Target in its own laboratories. This class 1 laser technology is safe, reliable, offers 100% operating comfort and is built for intensive, long-lasting use. Moreover it is possible to invisibly mount all components.

Target LaserTrack is suitable for both the private as well as the business sector.

The unique code on your vehicle will be recognized automatically by the home transponder whenever you are within reach of it. A company can, per home transponder, allow entrance to its grounds or parking lot for up to fifty vehicles by using the Target LaserTrack. Comfortable and safe for the employees especially when they are working late.

Target LaserTrack has over four-and-a-half billion unique codes. This means that only vehicles of which the code is programmed into the house transponder will be able to get in.

HOME EARLIER

With the Target LaserTrack you are home earlier. Whether this is at home or at work. Whenever the vehicle comes within reach, your gate opens automatically, your garage door opens or the exterior lightning switches on. Driving through smoothly that is. Nice and safe as well. Because that is what this system is about: Comfort and safety.

THE LASERTRACK IS AVAILABLE IN THREE VERSIONS

LT400 VEHICLE TRANSPONDER

- 1 vehicle transponder LT400
- 1 LED
- 1 piëzo signal unit
- All required connecting- and mounting materials

LT430 HOME TRANSPONDER

- 1 home transponder LT420
- 1 control print panel LT445
- All required connecting- and mounting materials

LT450 COMPLETE SYSTEM

- 1 vehicle transponder LT400
- 1 home transponder LT420
- 1 control print panel LT445
- 1 piëzo signal unit
- 1 LED
- All required connecting- and mounting materials

There is a special transponder for motorcycles: the Target LT400-M. The controlling elements of this set are completely waterproof and weather resistant.

IMPORTANT INFORMATION

Practically all laser systems which use infrared light send out their information on 904 Nanometre, the frequency which has become the global standard. The laserguns for speed control measurements of the police use this frequency as well as the Target LaserTrack does. In the contrary to all other laser systems the Target LaserTrack is the only system that is equipped with intelligent electronics that is capable of recognizing signals of laserguns and other laser systems that use the same frequency. After recognizing a unknown infrared signal the Target LaserTrack automatically switches itself off after a few seconds to prevent interference and, for instance, enable a laser speed control measurement. In this case you will be informed by a light- and audio signal.

Target LaserTrack meets the highest European standards for automotive accessories. Therefore you can use the system anywhere.
